

CLAIMS

0015

What is claimed:

1. The Drinking Game Cup Holder is a multiple-cup holder for the purpose of eliminating the movement, slipping, sliding, falling over, knocking over, or any disturbance of the cups therein, for the use in the generally known party game of "Beer Pong" or "Beruit" or any game similar (see DESCRIPTION OF RELATED ART for explanation of game and relation of invention to game), the holder comprising:

a triangular frame "type" unit comprising ten individual equally spaced holes, for the use of holding disposable plastic party-size cups in a specific configuration;

the top of the holder is configured to lay out the cup holes in a formation of ten cups in four rows: four, three, two, one orientation from the back of the holder to the front;

the holes are equidistant for the optimal playing of the game for which they will be used;
the holes are cut to uniform size so that the same area of each cup will be visible to the game players;

the thickness of said holder is unique to this embodiment for the expressed purposes of cup stabilization, and to create the necessary visible area of cup to be viewed for the purpose of the game for which they will be used;

the bottom of the holder is a smooth undisturbed surface with the exception of three rubber grips placed accordingly on the three corners of the bottom triangular surface, to stabilize the holder for the game in which it will be used.

2. The Drinking Game Cup Holder of claim 1, (with the exception of the rubber or plastic or similar grips as described in claim 1) maybe formed of a single plastic, cardboard,

polystyrene, or similar material, or the holder may be formed of a combination of prior mentioned materials.
